SSLFH-A	1650 748	5500 2495
SSLFH-B	3100 1406	4345 1971
SSLFH-C	3800 1724	5630 2554

TYPICAL PLUG WELD

Plug Welded Testing and Calculations were performed to meet OSHPD criteria.

INSTALLATION INSTRUCTIONS

1. Remove cap screw "L" and place mountings under hole in equipment base.
2. If supports are badly off level, shim mounting level before securing.
3. Pass cap screw "L" through hole in equipment base and screw loosely into adjusting bolt "M".
4. Repeat this procedure in all mounting locations.
5. Keep "Upward Rebound Plate" from turning by restraining it with a screw driver through the adjustment port.

SPECIFICATION

Equipment shall be installed on resilient mountings designed and rated to resist seismic forces in all directions. The snubber shall be adjustable in the vertical up direction and allow a maximum of 1/4" (6mm) travel in the vertical and horizontal direction before contacting the resilient snubbing collars. Mountings shall have an Anchorage Preapproval "OPA" Number from OSHPD in the state of California attesting to the minimum listed certified Horizontal and Vertical load ratings.

All mountings shall have adjusting bolts that are rigidly bolted to the equipment.

6. Take two full counter-clockwise turns on each adjusting bolt "M" and continue even adjustment of all mounts until all springs are loaded and mountings are back to Free and Operating Height.
7. Take no more than two additional counter-clockwise turns on any "M" adjusting bolt to level equipment.
8. Tighten cap screws "L" to secure equipment.
9. Turn rebound plate clockwise to lower or counter-clockwise to raise. Adjust plate so there is 1/8" (3mm) clearance between top of plate and underside of all directional neoprene cushion.

Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Mountings shall have a minimum of 2 spring inspection ports. Submittals shall include spring diameters, deflections, and calculations signed by a registered engineer showing that the seismic loads the mountings are to resist have been properly calculated. Mountings shall be Type SSLFH as manufactured by Mason Industries, Inc.

OSHPD OPA-0198 Rated Load Curves (lbs kg)†

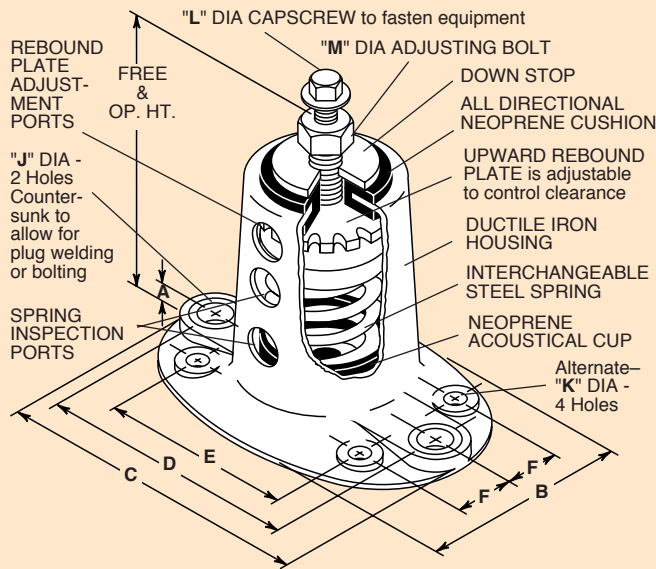

†For Kn divide Kg by 102.

Horizontal, Vertical and 45° plotted Ratings are California OSHPD approved values having the OSHPD Anchorage Preapproval Number OPA-0198. Testing and calculations were performed to meet OSHPD criteria.

To use approved OSHPD rated load curves:

- 1) Calculate Vertical and Horizontal Forces on mountings including translations and overturning moments.
- 2) Plot Horizontal Load vs Vertical Load. The point must fall within the area below the OSHPD curve.
